PROFESSIONAL SUMMARY

Magna Cum Laude Computer Science graduate and full-stack developer experienced in Next.js, TypeScript, Supabase, Flutter, and Laravel, with hands-on LLM integration (Gemini, Ollama) and AI-assisted development using GitHub Copilot, Cursor, and Cline. Built **Developer Workplace**, a Supabase-backed developer workspace with separate private and public Gemini assistants. Interned at BMWare as a system architect, designing a real-time emergency-response platform and a PayPal-integrated insurance app. Led a thesis project running YOLOv11 on-device with Unity Sentis.

EDUCATION

Bachelor of Science in Computer Science — Magna Cum Laude

Graduated September 2026

Pampanga State University

- **Relevant coursework:** Software Engineering, Database Management, Artificial Intelligence, Mobile Development | **Leadership:** AI Lead, Technical Research and Development

PROFESSIONAL EXPERIENCE

Technical Intern & System Architect | BMWare

Feb 2026 – Apr 2026

- Built modular, cross-platform mobile apps in Flutter across multiple production projects, integrating with a Laravel (PHP) backend through RESTful APIs.
- Designed the database schema (ERDs) and microservices for **Adsumus Dispatch**, a real-time emergency response platform with fallback state synchronization, encrypted messaging, and geolocation tracking.
- Architected **InsureMe**, a production digital insurance app, integrating the PayPal SDK behind a decoupled abstraction layer to isolate payment state from app logic and avoid handling payment data locally.

PROJECTS

Developer Workplace — Sole Developer

Personal Project · [Case Study](#)

Next.js · React · TypeScript · Supabase (PostgreSQL, Auth, Storage, RLS) · Google Gemini API · GitHub App · dnd-kit

- Designed and built a full-stack developer workspace (projects, Kanban, calendar, plans, notes, goals) in Next.js, React, and TypeScript, using Supabase Auth and PostgreSQL Row Level Security to isolate each user's data.
- Built persistent dnd-kit Kanban boards and a drag-to-reschedule calendar with optimistic updates, reconciliation on failed saves, keyboard-accessible dragging, and timezone-safe date handling.
- Integrated a read-only GitHub App using server-side App JWTs, short-lived installation tokens, PKCE, and installation ownership checks, keeping GitHub login separate from repository authorization.
- Implemented separate private and public Gemini assistants with server-verified entity ownership, bounded context, validated file attachments, and Supabase-backed rate limiting; the public assistant reads only owner-published data through PostgreSQL projections/RPCs.

AI-Powered Maintenance Simulator — Project Lead & System Architect

Thesis Project, 2025 – 2026

Unity · C# · YOLOv11 · Unity Sentis · Firebase Firestore

- Led the thesis project and designed the end-to-end architecture (DFDs, ERDs) for a real-time car part recognition app.
- Engineered on-device AI inference in C#, running YOLOv11 locally on the mobile device through Unity Sentis.
- Built the Unity mobile interface and a Firestore (NoSQL) data pipeline for real-time synchronization and storage.

LLM-Powered Chatbot Web Apps (AutoCare & Furniture) — Developer

Personal Projects

Ollama · LLM Integration · Vercel · GitHub Copilot · Cursor · Cline

- Built two web apps, an auto care site and a furniture site, each with an AI chatbot powered by LLMs integrated through Ollama; developed with AI-assisted workflows and deployed live on Vercel: autocare.pranzzz.vercel.app · furniture.pranzzz.vercel.app

Web-Based VR Classroom (WebXR) — Full-Stack Developer

Personal Project, 2025

A-Frame · Node.js · WebXR

- Architected a multi-user virtual classroom environment using A-Frame and Node.js, with secure user authentication and real-time synchronization between users.
- Optimized web assets for mobile-first responsiveness, reducing load latency and improving accessibility.

TECHNICAL SKILLS

Languages

Dart, TypeScript, JavaScript, C#, PHP, Java, C++, SQL, HTML5/CSS3

Frameworks & Platforms

Next.js, React, Flutter, Laravel, .NET, Node.js, Unity, A-Frame (WebXR)

AI & Automation

Google Gemini API, Ollama (local LLMs), OpenAI/Anthropic APIs, LLM integration, prompt engineering, n8n, agentic workflows, AI-assisted development (Copilot, Cursor, Cline), YOLOv11, Unity Sentis

Databases & Backend

PostgreSQL (Row Level Security), Supabase (Auth, Storage), MySQL, MS SQL Server, Firestore, RESTful APIs, GitHub App/OAuth

Tools & Practices

Git, Docker, Vercel, CI/CD, JIRA, Agile/Scrum, system design (ERD, DFD, context diagrams), UI/UX design, 3D simulation
